

Day 10 - Pandas - Iteration and Sorting

There are 3 main ways of iterating through a dataframe. To know more about each one of them, check [here](#).

To know about the efficient ways of iterating through a dataframe [read this article](#) published on Towards Data Science. To learn about making iteration much faster, read the [article here](#)

Coming to the second topic sorting a dataframe. [Here](#) are the different ways to sort a dataframe with examples. [Here](#) is another real python's detailed documentation on sorting a dataframe.

Exercises:

- [Here is a link](#) to practice sets that will help in improving your understanding of iterative through a dataframe.
- [Here is a link](#) to practice questions that will help to understand sorting a dataframe better.

Here is the [link to my tutorial video](#), it covers the commonly used techniques for both iteration and sorting a dataframe.
